

Deployment toolkit

Use these editable templates alongside your portfolio. Empty fields are intentional learner inputs. Record the evidence source and date. Keep prior versions.

1. Site Map v0 / v1

Engagement and version:

Actual decision and authorized decider:

People: users, owner, approver, maintainer, blockers, consequence bearers:

Process: before, during, after; handoffs and exceptions:

Technology: applications, interfaces, dependencies:

Data: origin, freshness, quality, permitted use:

Constraints: tag physical / political / habitual; identify authority:

Incentives: benefits, resistance, accountability:

History: earlier attempts and observed failure reasons:

Verification status: claim / known-assumed-unknown / source / date / next test / owner:

2. Say/do gap log

Record: reported behavior / observed behavior / scope of observation / competing explanation / next observation. A discrepancy invites investigation, not an accusation.

3. Frame Card

For [user], improve [workflow] from [current condition] to [desired condition], measured by [metric with denominator], within [constraints].

If we believe [hypothesis], we should do [smallest action]. We will change our mind if [evidence].

Operator agreement, source and date:

Baseline definition and eligible population:

Quality guardrails and stop conditions:

Exclusions and unresolved dependencies:

Gate decision owner and review date:

4. Prediction log

Before action, record: timestamp / hypothesis / expected result / measure and denominator / scope / confidence with reason / evidence that would change the decision / planned reading date. Preserve the original entry.

5. Delta log and gate

Record: prediction reference / observed result / denominator and exclusions / difference / alternative explanations / updated belief / land-iterate-pivot-stop decision / owner / next test. Use a separate entry for the second reading after adoption.

6. Landing checklist and adoption plan

For reliability, observability, security, integration, usability and adoption, record: evidence / readiness state / unresolved gap / owner / next action.

Named operating owner, authority and backup:

Manual fallback and disable trigger:

Recovery test and escalation:

Eligible work denominator and adoption period:

Outcome reading date:

7. Distill pack

Pattern: principle, conditions, mechanism, limits:

Primitive: interface, version, tests, maintainer, local configuration:

Playbook: repeatable method and improvement:

Product signal: observation, consequence, scope, hypothesis, validation:

Site capability: demonstrated handover behavior and feedback loop:

Model update: previous belief, new evidence, revised belief:

8. One-page decision memo

Decision required. Recommendation. Evidence and its scope. Known facts. Assumptions and unknowns. Options considered. Trade-offs. Authority boundary. Main risk, trigger and control. Next action, owner, date and reassessment condition.

Worked starting set: Northstar

Decision: test reviewable category assistance using synthetic tickets. Maya owns the workflow, Priya approves data, Luis maintains integration. Known in the case: the prior automation increased checking work. Assumed: category lookup creates avoidable effort. Unknown: whether integrated suggestions will sustain use.

Frame: median review time of 20 minutes to at most 14, on twelve comparable simulated tasks, with human approval and at most one misroute. These are fictional exercise thresholds.

Prediction: assistance will meet those thresholds. Write your timestamp before opening the results.

First reading: median 12, one error, twelve eligible tasks, two excluded inputs. Prepare a controlled landing after checklist gaps close.

Second reading: 40 assisted tasks of 100 eligible, below the pre-agreed 70 percent adoption target. Iterate on duplicate-entry friction and incentives. Do not declare the full outcome achieved.

Distill: integration and trusted override handling matter alongside suggestion quality. Reuse the tested decision-recording contract. Keep the category vocabulary local.
